

Obstruct defeating

Defeating guards and protective devices must be made more difficult.

The following measures may contribute:

- Cover fixation of position switches
- Use type 2 position switches (with separate actuator) with individual coded actuators, so that an actuator does only match to just one position switch at machine user's site
- Fix of position switch actuators in such a way that it is not possible to detach the fixation with readily available tools (pliers, screwdrivers, ...) (Example: rebores screw)
- Use two position switches as break/make combination
